

REDUCE RISK ON THE DESKTOP

# Your Windows Assets don't have to be an attacker's best friend

An entitlement audit service helps organisations significantly improve desktop security by making it easy to remove administrator privileges from users without impacting productivity and in doing so dramatically reduce the attack surface available to malicious users – both internal and external.

Enterprises can get complete visibility into user activity and ensure total control of user privilege right down to the basic file system level using this service.

## KEY BENEFITS

- Asset discovery and account mapping across the desktop environment
- Full visibility into misuse of privileges on Windows desktops
- Input into internal and external compliance teams ensuring all users log on with a standard user account
- Enables the organisation to define privilege policy and controls
- Introduce the concept of least privilege to the organisation
- The need for auditability and clarity is paramount to address risk associated to local administrator privileges

## METHODOLOGY

- Kick-off workshop to introduce all the role players and project objectives
- Installation and configuration of virtual appliance
- Discovery of assets
- Collection and normalisation data

## DELIVERABLES

- Provides assets discovery
- Holistic visibility and reporting of applications requiring privileged access
- Misuse of privilege report
- Recommendations specific to policy definition of desktop controls
- Define a least privilege roadmap and strategy
- Define a application white list roadmap and strategy

## WHO NEEDS THIS SERVICE?

The entitlement audit enables the IT Security team and Application Owners with the required visibility into the Windows Desktop Environment. As most organisations allow the use of local administrators, the need for auditability and clarity is paramount to mitigate risk and address audit findings – a key requirement for IT Risk and Compliance Officers. This service provides an in-depth view of application access activity on desktops.

This is the first step for stakeholders to strategise a least privilege model with the benefit of reducing operational stresses on the desktop teams.

## INVESTMENT

Elapsed time

< 500 Desktops	3 weeks	R45 000
501 - 1 000 Desktops	4 weeks	R70 000
1 001 - 5 000 Desktops	6 weeks	R98 000
> 5 000 Desktops	Scope with Puleng Professional Services	

- Pricing excludes VAT.
- Engagement terms and conditions apply. Your Puleng Technologies Sales representative will be able to assist with any queries.

## ABOUT PULENG TECHNOLOGIES

Puleng Technologies is a next generation Information Technology Service Provider helping customers to change the prevailing mind set from “How do we build technology?” to “**How do we consume technology?**”

This shift must facilitate the ability for users to subscribe to Corporate Electronic Services that deliver competitive advantage.

### Our five key business focus areas are:

- Increase operational efficiency through automation and transparency
- Reduce costs to operate IT systems and associated processes
- Focused customer centricity through Self-Service enablement
- Risk mitigation through Security, Recoverability & Compliance
- Driving Innovation through specialisation and strategy
